Machine Learning Operations (MLOps): Getting Started

Lakshmi Girija Dhulipati

Software Development Engineer | Boston University - Master of Science | Ex - Goldman Sachs
Boston, Massachusetts, United States

Summary

I am a graduate student at Boston University pursuing a Master of Science in Artificial Intelligence, driven by a passion for solving complex problems through data, algorithms, and intelligent systems. With a strong foundation in machine learning, data analysis, and algorithm design, I bring a blend of technical depth and analytical insight to every project I take on.

I'm actively seeking opportunities in Machine Learning Engineering, Data Analytics, or Software Development, where I can contribute meaningfully and grow alongside forward-thinking teams.

Let's connect: dlgirija@bu.edu

Core Strengths & Skills:

Machine Learning • Algorithm Design • Data Analysis • Coding • Analytical Thinking • Conceptual Reasoning • Communication • Detail Orientation • Quantitative Aptitude

Experience

Boston University

Software Engineer

July 2024 - Present (1 year 3 months)

Boston, Massachusetts, United States

As research assistant at Boston University, I worked at the Guenther Lab to understand speech processing in the brain

- Identified brain regions involved in stuttering and different types of stuttering from fMRI recordings of various patients with an accuracy of 88% using the sklearn library to design algorithms.

- Integrated new features to the FLvoice software that minimizes quality control time of fMRI data

- Brainstormed and came up with machine learning techniques that would work with the use case.
- Collaborated effectively with neuroscientists, statisticians and programmers on the task.

Goldman Sachs

Summer Analyst

May 2023 - July 2023 (3 months)

Hyderabad, Telangana, India

As summer analyst at Goldman Sachs, I worked as a frontend engineer to fix a website crucial in the process of updating changes.

- Revamped a website as a software developer that cutoff the effective time required to update changes
- Streamlined the GitHub workflow that empowered internal users to update directly, saving an estimated 15 hours per month
- Engineered solutions using ReactJS, NodeJS and Python along with the use of the tool JIRA to improve communication.
- Wrote tests to ensure the code doesn't break when future developers work with the website.
- Functioned independently and as a team to make sure the work gets done on time and increasing user engagement.
- Incorporated Version control in Git and the use of CI/CD

SmartTerra

Data Analyst

January 2022 - April 2022 (4 months)

India

- Collaborated with professionals and based on their insights, labeled the water usage data as anomalous.
- Created multiple plots and graphs integrating pandas and numpy to explore the data.

- Developed an algorithm to detect anomalies based on previous expected data values which performed better than off the shelf seasonal anomaly detection algorithm
- Conducted statistical analyses of the data to prove the results were meaningful
- Deployed the classification algorithm on the website, working alongside another team.

Education

Boston University

Master of Science - MS, Artificial Intelligence · (July 2024 - December 2025)

International Institute of Information Technology Hyderabad (IIITH)

Bachelor of Technology - BTech, Computer Science · (October 2020 - May 2024)

Narayana Institute

Secondary Education, MPC · (July 2014 - March 2020)
