

SUMMARY

Software Engineer with 2+ years delivering scalable, high-performance TypeScript & Java user centric applications, optimized load times by 30%, writing code that follow OOPS concepts, and building scalable, server side applications and APIs

EDUCATION

- Boston University**
M.S. in Artificial Intelligence, GPA: 4.0/4.0
• **Awards:** Best Paper Award(Intro to NLP) & Merit Scholarship
- Boston, MA*
Sep 2024 – Dec 2025
- International Institute of Information Technology**
B.Tech. in Computer Science, GPA: 3.56/4.0
• **Coursework:** Data Structures & Algorithms, Operating Systems, Computer Systems Organization, Object Oriented Design
- Hyderabad, IN*
Oct 2020 – May 2024

WORK EXPERIENCE

- Boston University**
Software Engineer
• Improved backend internal tooling for spectrogram-based audio data QC by implementing feature enhancements in Matlab, resulting in **50%** faster human verification time.
• Created beep, voice onset, offset analyses, and adaptive timing workflows to guide participants through the task with millisecond-level precision. Created and reworked documentation for easier transition.
• Designed and implemented a rich matlab graphical user interface for real-time stimulus delivery in the mri environment completing the end-to-end development and validation in one week.
- Jul 2024 – Present*
- Goldman Sachs**
Analyst
• Rebuilt a React-based internal logging platform using agile methodology increasing adoption rates by **37%**, reducing data pipeline and service update latency, enabling real-time monitoring and faster debugging for downstream applications.
• Authored **40+** unit and end-to-end automated tests to validate UI components and workflows, raising front-end test coverage from 32.5% to 42.4%. Built and worked using Jenkins CI/CD in agile workflow.
• Automated the Github workflow for logging using the web app, saving **25** engineering hours per month.
- May 2023 – July 2023*
- Smarterra**
Software Engineer
• Designed and optimized a backend ingestion pipeline with AWS Kinesis and Lambda to reliably process **10K+** daily water-usage sensor events, feeding downstream analytics and anomaly-detection services in real time.
• Partnered with operations teams to wrap pipeline outputs in secure **REST APIs**, enabling seamless dashboard integration and consistent delivery of critical insights.
- Jan 2022 – Apr 2022*

PROJECTS

- **Large-Scale Autoencoders for Feature Extraction:**
 - Built and optimized autoencoder models on datasets exceeding hundreds of GBs, focusing on dimensionality reduction; deployed in Python with PyTorch for efficient training on shared clusters
- **Boston Police Dept - Financial Analytics:**
 - Led analysis of 100K+ payroll records to identify patterns; developed an XGBoost model predicting officer attrition with 85% precision, uncovering a 12% pay gap across races to inform financial decisions.
- **Nourish Nest:**
 - Developed the responsive website for Flask-based microservices grocery platform using JavaScript. Optimized page load and search interactions achieving a 30% reduction in initial load time and integrated openAI chatbot using API keys
- **Debiasing Word Embeddings:**
 - Applied algebraic techniques to adjust pre-trained vectors in PyTorch, reducing gender-bias by 40% on analogy tasks; focused on reusable frameworks for fair ML in production.

INVOLVEMENT

- **ChartAble:** Led team of 4 to build an accessible Chrome extension for visually impaired users to navigate charts with keyboard + audio. Finalist at GirlHacks 2025.

SKILLS

Programming & Foundations: Python, C, SQL, C++, Java, R, Lean, Assembly(x86), MATLAB, RDBMS
Frontend & Backend: HTML5, CSS3, JavaScript, TypeScript, React, Flask, Spring Boot, Django, VSCode, IntelliJ Idea
Testing & Automation: Git, GitHub Actions, Docker Compose
APIs & Cloud: REST APIs, WebSockets, JSON, AWS Lambda, Docker
